The landscape features are just circles on a map we created last March. If they need to be moved, let me know, and we can handle that here.

Ed,
Attached is a summary of some of the new research related to GSENM Objects since designation.

Also, I feel we can offer a little more information about the landscape feature data that is being used on the maps. I can work with Brian on it if you like.

I hope you find the information useful and please let me know if you need anything else.

Matt, I wanted to share the maps i sent back to D.C. As my note indicates,
We will be overlaying the data themes on one map. Ed
